

Math Benchmark for _____
(month)

This month I will show my work on the following problems:

Extra Question: Look at the graph from question 20. Describe in one or two sentences how you can find the location (4,2) on the graph. (This is an example of a question that could help a teacher determine if students are able to transfer skills that have been covered in scope and sequence)

These are the math words that I don't understand:
